

Superior Sawing Technology – Superior Sawing Profitability

Behringer Saws

50% Faster

Profitability

“Affordable” Doesn’t Always Mean Cost-Efficient

When deciding which machine to purchase, many factors come into play including basic machine design, capabilities and price. Often upfront price is given undue weight in the process with so-called “affordable” saws given the advantage. To make the best business decision it is necessary to look beyond a low price tag. Inferior design and the poor quality of some low cost saws can drastically increase tooling costs and use significantly more blades week-in and week-out over the life of the saw. The result is greatly increased out-of-pocket expenses and lost profits.

That’s why you should consider the “best cost” for the long-term, and the benefits of getting the greatest return on your saw investment with a Behringer saw. Over the life of a Behringer saw, you will save significant money after the initial purchase. One reason is because Behringer saws have unmatched design advantages, they’re more rugged and rigid and use significantly fewer blades — up to 30% fewer — with potential savings of thousands of dollars annually. Looking at the price of a new saw makes sense; just make sure it doesn’t make you keep paying over the long-term.

Material Handling Systems: Labor-Saving Innovations

Behringer provides solutions to material handling that push your productivity even further by saving man hours in all phases of sawing operations. As your partner in problem solving we can help you create a complete plant concept featuring individual in-feed, transfer and transport solutions designed to work seamlessly. Our complete range of peripheral equipment encompasses user-friendly hardware and intelligent software programs for optimum operating sequences, maximum process reliability and a consistently high standard of quality in everything you produce. Typical systems are fully integrated to handle an entire operation from powered roller conveying to cross transporting and bundle clamping, through cutting to length, ejection and sorting.

Production Efficiency

To make sure that material handling components and saws are compatible, Behringer fabricates all material handling systems and does all saw customizations at our Morgantown, PA plant. This assures that your system is functioning smoothly to your specifications, and delivered to you with the shortest lead times. With our in-house expertise in hydraulics, electronics, and fabrication, we can support virtually all of our customers' questions and design requirements. Our team is also fully trained to modify stock models through the addition and removal of optional components to meet your specific requirements. It's all part of our commitment to make Behringer Saws an integral and smart business partner in your operation.

We Build Your Profits With Every Cut.

Behringer Saws has a mission: to produce superior sawing technology and to be a superior business partner. Let us help you become more successful by putting our long history, unparalleled knowledge, and high-quality products behind your sawing operations. Behringer knows how to help you become more profitable by offering the right combination of products, people and services.

Buying a saw is a business decision taking into account productivity, profitability and workforce efficiency. We view saws as tools to help your operation optimize those factors. We think Behringer saws are one of the smartest investments on the market today.

30% Fewer Blades

What Good Is A Saw That Cuts Profits?

Our Saws Have a Whole Range of Features Designed to Raise Productivity and Profits:

- Easy-to-access blades reduce the time it takes to change blades - just two to five minutes by one man with no tools.
- Automatic moveable band guide positioning maximizes beam strength, gives the fastest cutting times and best accuracy available, helping to generate 30% better blade life.
- Automatic feed rate regulation system delivers a constant material removal rate, maximizes saw blade life, adjusts the feed rate as material width and/or hardness changes, is fully automatic, and doesn't require operator involvement.
- Extensive use of cast iron and Meehanite cast iron parts from Behringer's own foundry withstand the fatigue and vibration caused by high production sawing.
- Built to optimize the performance of state-of-the-art carbide blades.

It all comes down to our business partnership philosophy of building saws for your long-term productivity, instead of cutting corners to offer the lowest upfront price tag.

Behringer saws have built-in design advantages to give you the fastest cut times and unsurpassed accuracy for increased productivity over the long term.

On average we cut 50% faster than the competition for 50% higher productivity. In fact some companies have been able to save labor costs by eliminating overtime or even a third shift thanks to Behringer quality and productivity. While Behringer is raising productivity, lower cost saws will have you paying in downtime and lost production due to repairs.

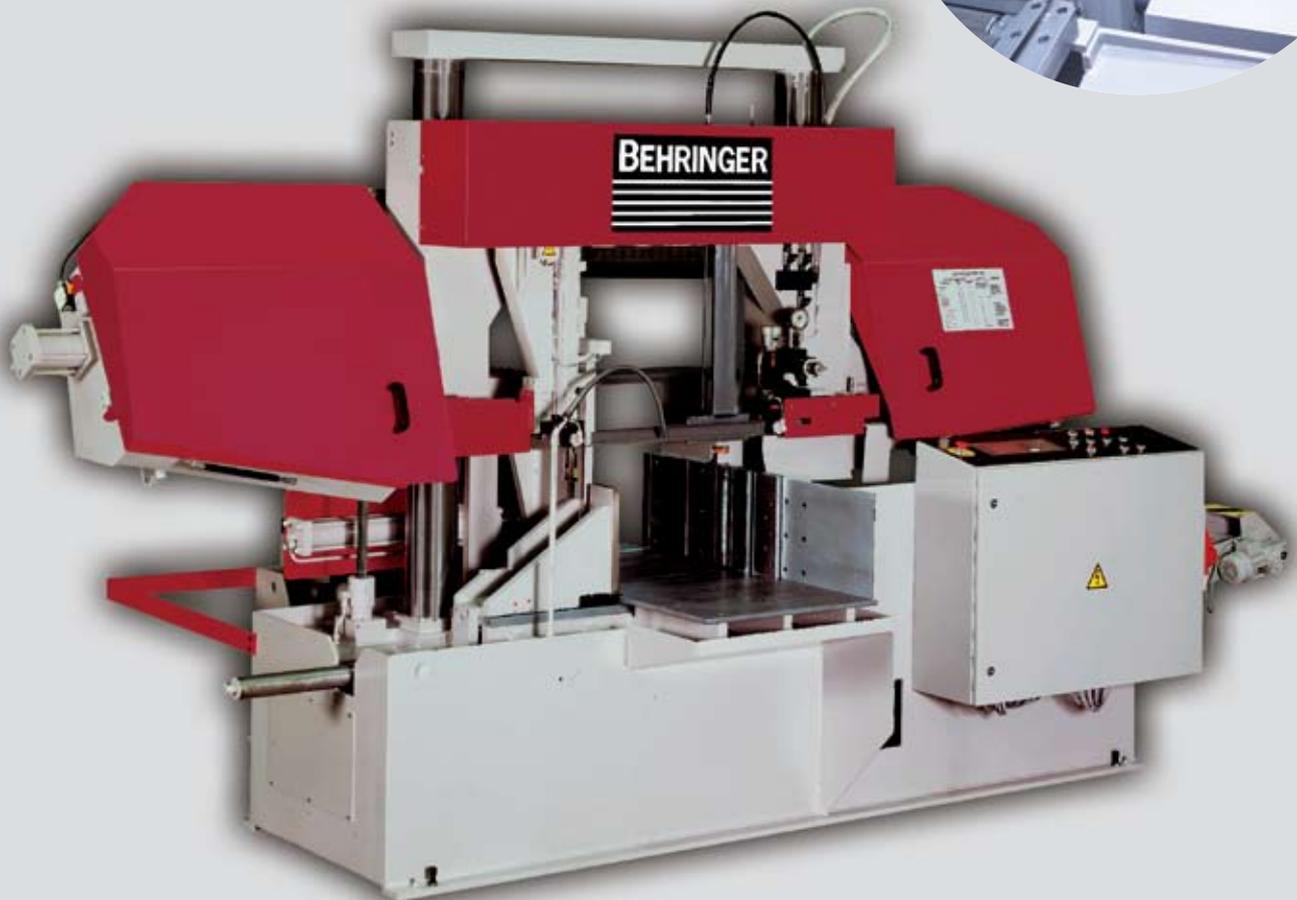

Industry-Best Training

We Cut Your Downtime With In-Stock Parts & Unmatched Service

The Training Advantage:

When you buy a Behringer saw you get more than just superior design and sawing technology; you also get extensive training support from our factory-trained field service technicians. These credentialed, experienced professionals are Behringer's own team, not third party field service personnel. They will be at your site to set-up the equipment and train your operators when your new saw arrives. Some saw companies spend only a few hours training customers on new equipment. The Behringer difference is that we don't leave until your operators are comfortable with the equipment and ready for us to leave – even if that means our technician must stay for additional time. Only after this process is completed and you sign off, do we consider the sale complete.

Our philosophy on parts and service is to be ready to deliver whenever and wherever you have a need. Our 12,000 square foot Morgantown, PA warehouse stocks over 54,000 parts, with a state-of-the-art tracking and ordering system designed to get you what you need fast. Behringer's highly experienced service team is ready to solve your service problems day-in, day-out, coast-to-coast. Parts and service are an integral part of our commitment to making your sawing operations more profitable and productive.

Wide Range of Markets & Applications

Behringer Saws designs, manufactures and installs high quality, cost-effective bandsaws, circular cold saws, structural fabricating equipment and integrated material handling systems for the metalworking and structural steel industries. Cutting and sawing is our primary focus, reinforcing our mission to help your operation become more productive and profitable.

Quality Others Can't Match

The wisdom of making quality products is born out everyday as our customers benefit from superior performance, increased productivity and profitability other saw manufacturers can't deliver. We start by forging our own castings to ensure the most rugged base to build your saw upon. Add in high efficiency drive systems, heavy-duty guides and wheel bearings, massive chrome-plated columns and more and it results in a win-win scenario, because happy customers are repeat customers.

Behringer

- Heavy-duty horizontal automatic and semi-automatic bandsaws.
- Mitre saws.
- Plate saws.
- Power hacksaws.
- Complete sawing systems.

Behringer Eisele

- High throughput manual, semi-automatic and fully automatic CNC circular cold saws.
- In-feed, output and material handling systems.

Vernet Behringer

- Structural fabricating equipment
- High performance drilling, punching, shearing, notching and marking machines.
- Beam coping, and drilling and sawing lines.
